7. Description Of Incident

FRA58 was request to remove and weigh its drinking container after racing. The drinking container was filled completely by the TC and its weight was controlled. The total weight of the filled drinking container has been measured at 2.226kg. This breaches RRS-Appendix F - 50.1 (a) where the weight is limited to 1.5kg for a filled drinking container.

The drinking container weight when coming from the water weighed 0.926kg.

A higher weight of crew and/or personal equipment is believed to be helpful to carry bigger kites and increase performance.
